

Video amplifier from
https://gamesx.com/wiki/doku.php?id=av:g7000_av

"The composite video signal can be picked off pin 5 of IC679 but it is unsuitable for driving a standard 75 ohm TV/monitor as is. The signal is only about half a volt in size so requires some amplification.

The audio signal can be taken straight from pin 27 of IC652 but it is quite large and could do with some attenuation (unless you like it loud!)."

Audio input taken from
pin 27 of IC652
